

The aim of the Swedish Greenovation project (Grönovation) is to bring new knowledge about how innovation can be stimulated in the green sector, not least agriculture.

The project aim is to orchestrate development projects where collaboration takes place between developers and users. The goal is to develop new ways of organizing coproduction of innovation processes ending up in valuable solutions.

We conduct case studies on innovation processes – by means of collaborative research. We also conduct “sharp experiments” because we want to learn about innovation from inside.

Do you want cutting-edge knowledge on how innovation can be stimulated in the green sector? Join our project!
